

SERVER LOGISTICS

For the safe and secure movement of infrastructure equipment, managing risks and delivering on agreed standards

Enterprise computing companies and server manufacturers need specific transport and handling expertise for their equipment. This may be for one-off scheduled moves or ongoing multiple end-customer deliveries, and can include onsite installation.

TYPICAL BUSINESS CHALLENGES

- Ensuring high-specification transportation & handling
- Protecting against theft, damage & loss
- Managing each project end to end
- Continuously monitoring & proactively notifying
- Meeting standard operating procedures
- Delivering & installing on time

DHL SOLUTION

This solution delivers specialized transportation and handling for the safe and secure movement of servers. It provides project and program management, control tower end-to-end monitoring, supplier onboarding, freight management, trade compliance, and white-glove services including server installation.
