DHL CONSOLIDATED CLEARANCE

Customer Case Study

Global Forwarding

Customer profile

Large global eCommerce marketplace with existing B2C cross-border sales channels

Pain points

Customer, **previously benefiting from T86 mode with de minimis**, now needs to **transition to Formal Entry** to address business requirements such as

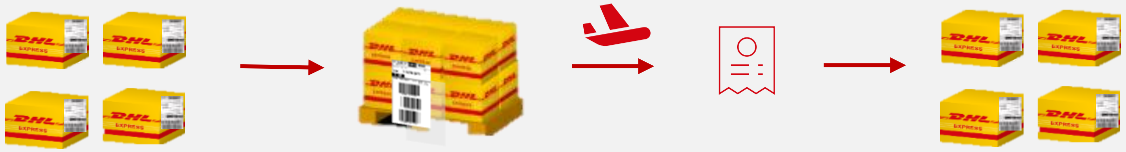
- Managing high-volume operations
- Handling a diverse range of HS codes
- Ensuring compliance adaptability and responsiveness
- Automating document handling

Shipment profile

Origin: CN / HK
US Gateway: LAX/ORD/JFK/DFW
Cargo Type: eCommerce Parcel with LMC label
Parcel Type: Mixed Commodity
Line Item: Up to 998 per HAWB
Quantity: 3000 parcels per ULD
Customer interface: API
Clearance Mode: T01 & T11
Manifesting: EDI with CDZ system
Exceptional Management Anti-dumping / FDA

DHL Solution Design

DHL's consolidated clearance process begins with **shipment consolidation** and **segmentation of orders** before departure. During this stage, **automated document handling** ensures all necessary customs paperwork is prepared for clearance. While in international transit, shipment status is monitored. Upon arrival, the consolidated shipments undergo quick customs processing and breakdown before final delivery.



Benefits

50% **reduction in customs processing costs** compared to the average market processing costs

100% **system automation** of manifesting

1-2 days **transit time saving** by keeping the last mile labeling process at the origin

*"We are pleased to see that **DHL Global Forwarding can develop solutions for eCommerce so quickly**, helping us adapt to the new tariff environment"*
