

INCREASE REVENUE BY SELLING ON AMAZON

THE LARGEST MARKETPLACE IN EUROPE

with DHL delivery in FBM and FBA models

amazon

DHL products for Amazon sellers

On Amazon you can sell in models:

1. FBM (*Fulfillment by Merchant*)

You sell, you send to the recipient

As a seller, you are responsible for shipping orders placed on the platform to end customers and handling returns.

When shipping directly to the consumer, choose **DHL Parcel Connect**, designed for B2C. Return of goods is possible with **DHL Parcel Return Connect**.

2. FBA (*Fulfillment by Amazon*)

You replenish your goods in Amazon's warehouse and sell, Amazon sends to the recipient

As a seller, you regularly replenish your goods in Amazon warehouses, from which they are shipped directly to the end customer. Amazon will also handle any complaints and returns.

When shipping to Amazon warehouses, choose the **DHL Parcel Connect Plus** or **DHL Parcel Connect Pallet** product. Remember to include your **ASN** (Advanced Shipping Notice) number in the notes.

International DHL products

Add a Package Confirm dispatch

Available for DHL Parcel Connect
and DHL Parcel Return Connect

DHL delivery in FBM model - type of numbering entered

How does it work?

Enter the **JJD number** in **tracking ID**

This is **necessary for the proper monitoring of shipments**. The JJD number ensures that international statuses are transmitted to Amazon.

**Available for DHL Parcel Connect
and DHL Parcel Return Connect**

DHL delivery in FBM model - data anonymisation

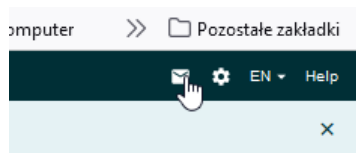

For data protection reasons, **Amazon anonymises recipient data such as email address**. This is problematic as the email notifications include, among others, **PIN for parcel collection in the case of delivery to a point of delivery**.

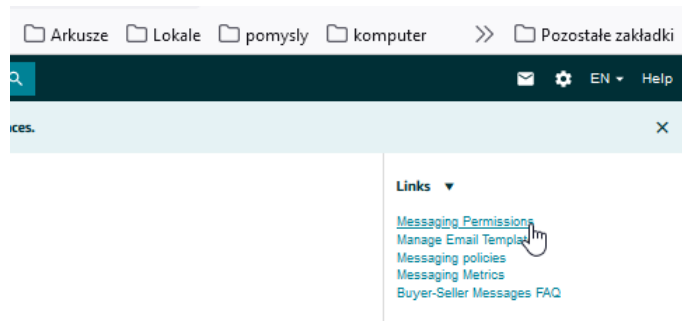

In order for the recipient to receive the notification **the seller must add the local carrier's email address on the Amazon platform**. This is essential for effective communication between the two parties. The addresses can be found on the next slide.

How does it work?

1. Go to Messages

2. Click on Messaging Permissions

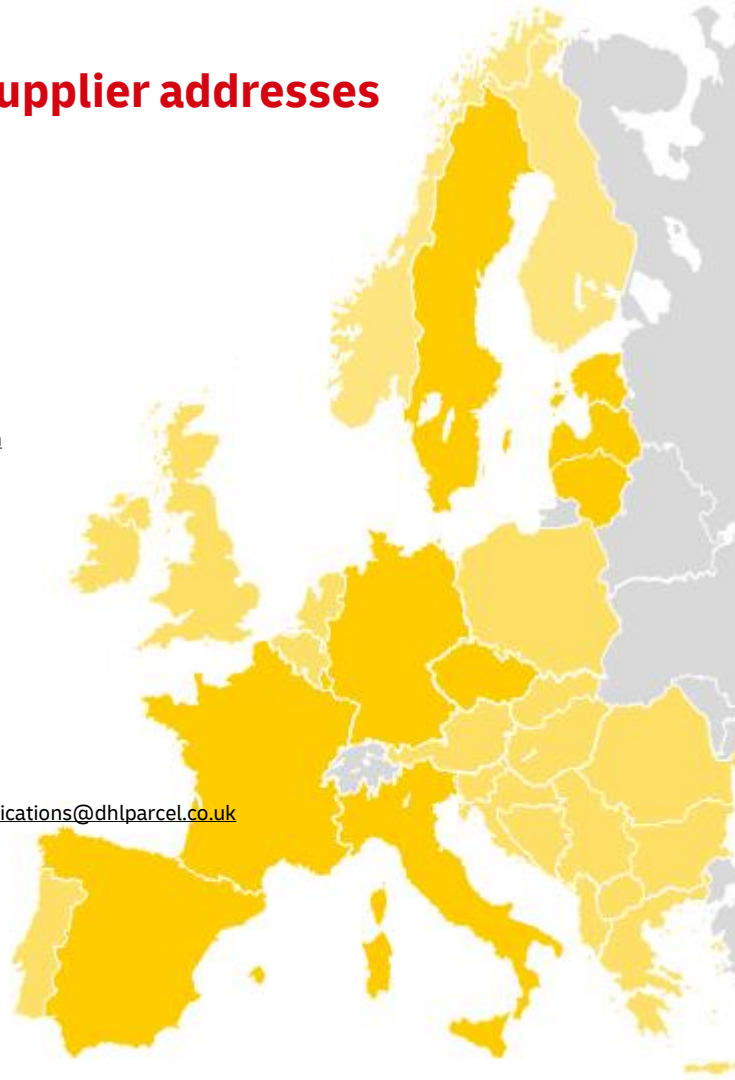

3. Add the local carrier's address by clicking on + Add an email address
